

2025 Year in Review: A Historic Market Year for Investors

By Peter Madlem, CFA | Chief Investment Officer and Valeria Chepilev, Associate Portfolio Manager

2025 was a strong year for investors. While we celebrate a good year in markets, it underscores the importance of maintaining investment discipline. Investors should continue to apply this lesson to their investment and financial plans for the coming year.

2025 was a historically strong year for markets despite the many events that took place along the way. The past year delivered no shortage of headlines including April's tariff announcements, ongoing developments in artificial intelligence stocks, the passage of the One Big Beautiful Bill Act, and more. Yet through it all, investors are likely happy as U.S. stocks rose to new record highs, international markets outperformed, and bonds continued their rebound. The S&P 500 has now generated double-digit returns in six of the past seven years and has nearly doubled in value since the market bottom in 2022.

The past year reinforces the lesson that the best way to weather uncertainty is to remain disciplined and focused on long-term goals. As we look ahead to 2026, understanding what drove markets last year can help investors navigate the challenges and opportunities that lie ahead.

Key Market and Economic Drivers in 2025

- The S&P 500 gained 17.9% with dividends in 2025, achieving 39 new all-time highs. The Dow Jones Industrial Average rose 14.9% and the Nasdaq returned 21.2%.
- The VIX, a measure of stock market volatility, remains low by historical standards, finishing at 14.95 after climbing as high as 52.33 in April.

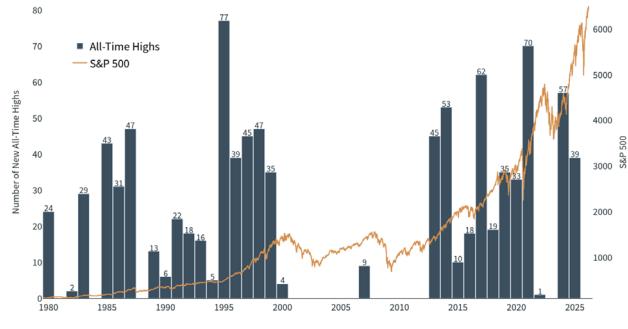

- The Bloomberg U.S. Aggregate Bond Index gained 7.3%, its best performance since 2020. The 10-year Treasury yield ended the year lower at 4.17%, down from 4.57% at the start of the year.
- International developed markets and emerging markets each gained over 30% in U.S. dollar terms based on the MSCI EAFE Index and MSCI EM Index, respectively.
- The U.S. dollar index ended the year at 98.32, falling 9.3% from 108.49 at the beginning of the year. The dollar reached a low of 96.63 in September.
- Bitcoin experienced a decline of about 6.5% from \$93,714 to \$87,647, after rising as high as \$125,260 in October.
- Gold prices rallied throughout the year, finishing at \$4,341 per ounce for a 64% gain. Silver prices also rose to \$70.60 per ounce from \$29.24 at the start of the year.

Major events in 2025

Many of the events of the past year were “known unknowns.” This concept was made famous by former Secretary of Defense Donald Rumsfeld, who distinguished “known unknowns” from “unknown unknowns.” For in-

vestors, this distinction can be helpful since the former are uncertainties we can anticipate. When markets react to these events, investors can be prepared in advance and avoid being caught off guard.

Concerns around tariffs, for instance, were very much on investors' radars ahead of April 2. While this didn't diminish the market reaction due to the size of these tariffs, it did allow the market to rebound quickly once events played out. Investors also knew the Fed would likely adjust rates once the job market weakened. Many also expected a new tax bill to pass given that Republicans control both houses of Congress.

Even concerns around AI, which are perhaps the biggest uncertainty for markets today, have also been at the top of investors' minds. While the DeepSeek moment in January, when a Chinese AI company showed that models could be created and run more cheaply, was unexpected, the parallels to the dot-com boom and past surges in capital expenditures by large companies are well understood.

To summarize the major market-moving events over the Year, here are the top 10:

- **January 20:** President Trump is inaugurated.
- **January 21:** The \$500 billion private-sector Stargate project is announced.
- **January 27:** AI stocks fall on DeepSeek news.
- **April 2 to 9:** "Liberation Day" tariff announcement leads to a market correction. This was followed by a 90-day pause which sparked a rally.

- **July 4:** The "One Big Beautiful Bill Act" is signed into law, extending many Tax Cuts and Jobs Act provisions.
- **September 17:** The Fed begins cutting interest rates again.
- **September 22:** Nvidia and OpenAI announced a major strategic partnership and investment, raising concerns of "circular deals."
- **October 1:** The government shuts down for what would be a record-setting 43 days.
- **October 14:** Jamie Dimon warns of "cockroaches" after the bankruptcies of Tricolor and First Brands.
- **December 16:** According to the BEA, the unemployment rate hit a four-year high of 4.6% in November.

Three key themes defined the past year

Market and Economic Chartbook | January 5, 2026

Magnificent 7 Performance

Meta, Amazon, Apple, Alphabet, Nvidia, Microsoft, and Tesla. Simple equal-weighted performance versus the S&P 500 and Nasdaq Composite, since 2020

What themes drove markets across these events? First, it's hard to miss the fact that artificial intelligence dominated market narratives throughout 2025. From massive infrastructure investments to concerns about market concentration, AI grew as an important source of economic growth and market returns. The Magnificent 7 stocks now represent around one-third of the S&P 500, creating concentration risk that means most investors have exposure to these stocks whether they realize it or not. Recognizing this when crafting investment strategies and financial plans will only grow in importance.

Second, tariff policy created uncertainty but has had less economic impact than expected. Tariffs on imported goods have risen sharply for many trading partners, yet the feared economic consequences largely failed to materialize. This is because companies adapted, tariffs were paused or scaled back, and consumer spending remained strong. For investors, this highlights that the outcomes of policy changes in Washington, whether its trade or federal finances, do not always have an obvious effect on the economy or markets.

Third, many asset classes performed well in 2025. International stocks outperformed U.S. markets, due in part to the decline in the U.S. dollar. Bonds generated strong returns and have nearly recovered their losses from 2022. Other individual assets including gold also had record years. So, benefiting from all of these asset classes is less about making individual investments, but about having the right asset allocation that can take advantage of opportunities while managing sources of risk.
